SPRINT
GROUP

Sprint Group understands the importance of keeping your commercial kitchen running smoothly at all times and, most importantly, serving customers.

You can rely on our multi-skilled refrigeration and catering engineers, all of whom are fully trained and hold the relevant certification in their specialist field.

Gas Safe inspections

The Gas Safe Register was introduced in 2009 to ensure high standards of installation and maintenance on all gas powered systems, appliances and pipework.

All Sprint Group engineers are Gas Safe registered, which means our clients can rest assured that their establishments fully comply with the regulations and they can concentrate on meeting customers' needs.

Pre-planned maintenance

At Sprint Group, we believe that prevention is better than cure.

Regular maintenance will save you time and money, reduce the risk of breakdowns - which in turn can lead to costly downtime - and give you peace of mind.

Our range of service and maintenance contracts includes:

- Repair service to all equipment
- Annual certification on gas equipment and associated services including pipework
- Standard breakdown (Monday to Friday from 9am to 5.30pm)
- Emergency breakdown (Outside usual opening hours)

Customers can now log their catering or refrigeration equipment breakdown directly with us without even picking up the phone via our online logging system.

Service and maintenance contract customers also benefit from preferential rates on breakdown callouts.

24 hour service

When a piece of catering or refrigeration equipment breaks down, we can provide an instant diagnosis.

If our engineers can't carry out immediate repairs on site, we will arrange for parts and/or equipment to be delivered as soon as possible.

Our fleet of vans is fully stocked with the latest equipment and parts and we house a wide range of equipment from the world's leading brands at our 17,000 square foot warehouse. Running alongside our vans are traffic jam busting Piaggio scooters.

Sprint's service department has state-of-the-art engineer tracking facilities and hand-held devices to give operators an estimated arrival time. We're also a registered supplier with facilities maintenance and asset management system ProNett and similar bespoke systems.
