

Whether you run a bar, restaurant, pub, club or wine bar, keeping drinks cool at all times is of utmost importance.

Sprint Group has the answer – a flexibly packaged cooling system created to cope with the demands of the cellar cooling industry.

Our qualified and experienced engineers carry out all installation work, including pipe work. We undertake a complete survey and offer technical advice on all cellar cooling systems.

We also offer service and maintenance packages to keep your equipment running smoothly and help reduce the risk of potentially costly breakdowns.

Selections are available with cellar temperatures from 4 degrees C to 12 degrees C and sound levels have been minimised throughout the range.

Condensing unit – key features

- Fully weatherproof with a powder grey coat gloss finish
- Externally accessible mains isolator; fully wired and enclosed electrical assembly
- Maximum access for service maintenance; simple hinged and removable panels;
- Fansets: Single phase, high efficiency, low noise external rotor design
- Externally accessible mains isolator
- Sound pressure: 41 to 49 dB(A) at 10 metres

Evaporator – specifications

- Compact steel chassis design; Single piece ABS front panel incorporating fan mounting and controls
- Front panel, drain tray and end panels are fully removable allowing full access to unit
- Electronic controller
- Energy saving: Option to operate twin and three fan evaporators on a single fan during off cycle or heating mode
- Sound pressure: 53 to 58 dB(A) at 3 metres

Options

- Wall bracket – suitable for condensing units and evaporators
- Acoustic kit – enables a further six decibel noise reduction
- Defrost sensor – required on all cellar selections at 4 degrees C and some at 8 degrees C

Your customers deserve the best taste experience - and this can only be achieved by serving beer at the correct temperature.

Trust Sprint Group to deliver the perfect solution plus an ongoing maintenance package, if required.

The premium quality keg coolers supplied by Sprint Group will not only keep beer cool, they are environmentally friendly and guarantee lower power consumption up to 57 per cent per annum.

We can supply three ranges - keg coolers for fitting under the bar and panel constructed key coolers specially developed for concealed installation and/or in locations which are difficult to access.

We also manufacture our own bespoke range of keg coolers.

Sprint Group can install keg coolers and carry out stainless steel bar alteration work.

Our service teams can also provide ongoing maintenance to keep your equipment running smoothly and help reduce the risk of potentially costly breakdowns.

Key features

- Ready to plug in
- Low power consumption
- Very short cooling time

- Thermostat cooling +2 degrees C / + 18 degrees C
- Natural refrigerant
- Low energy LED lighting
- Electronic thermostat with digital display
- Automatic defrost
- Consistent temperature of the kegs in relation to one another
- Can be fitted under sink, both to the left and right
- Height adjustable legs
- Easy to maintain and replace without dismantling lines
- Interior: silver grey coated steel panels
- Exterior: anthracite coated steel panels
- Wide silver-coloured handle
- Reinforced baseplate
- Exchangeable door seals
- Manufacturer's warranty
